

# Increasing the Probability of a Positive Interest Credit

Allocate premium across strategies to help diversify and maximize retirement income

Though it is impossible to predict market performance, you can help clients plan to address potential volatility and prepare for the future. The Synergy Choice™ Max 10-Year fixed index annuity from Aspida features 16 index interest accounts that credit interest based on the performance of three different indices. By allocating premium across multiple strategies, clients may be able to increase the probability of the asset receiving a positive interest credit in a given timeframe.

Note: The spread, index rate cap and participation rates are set for each index term (1 year or 2 years) by American General Life Insurance Company. For each 2-Year Point-to-Point index interest account subject to a spread, the total spread is the annualized spread multiplied by two. The participation rate is set at 100% for the index interest accounts subject to an index rate cap and/or spread and is guaranteed for the life of the contract. The Participation Rate index interest accounts will be subject to a participation rate, which may be lower than 100% and is subject to change. The composition and risk-controlled nature of the ML Strategic Balanced Index® may dampen the upside potential of the Index's performance. For all accounts, **the interest credited rate will never be less than zero percent.**
